

**LIGHTNING
P⚡GGY**

**Group Build
Workshop**

WHAT'S THE PROBLEM?

The USD has lost 99% of its purchasing power against Bitcoin in the last decade.

WHAT'S THE Solution?

Give children a head start with sound money. Lightning Piggy makes saving bitcoin fun, visual, and educational.

LET'S MAKE SATS THE SAVINGS STANDARD FOR EVERY CHILD!

Lightning Piggy p1 - ZapBox! edition

Time to Build Together

1. Welcome & Project Overview
2. Hands-On: Connect to 'WiFi' & install the Lightning Piggy 2.0 App!
3. Follow Along: Creating a Wallet in LNbits
4. Connecting Your Lightning Piggy to Your LNbits Wallet ⚡
5. Let's Set Up a Nostr Wallet Connect (NWC) Wallet
6. Pairing Your Piggy with Your NWC Wallet ⚡
7. Wrap-Up, Q&A, and Feedback

Let's Follow the Quick Start Guide

<https://lightningpiggy.com/build/>

Then select your piggy.

Quick Start Guide

If you already have the single board computer, follow these steps:

1. Choose a wallet that supports Nostr Wallet Connect (NWC).
 - **For beginners:** We recommend [Coins](#) — it's simple and custodial (with the option to auto-withdraw to cold storage), so you can get started quickly.
 - **For a non-custodial setup:** We recommend [Alby Hub](#) — it supports multiple friends and family accounts and is easy to use.

Once your wallet is set up, copy your **Lightning Address** and **NWC link**.

2. Flash the firmware using the [MicroPythonOS web installer](#). You'll need a Wi-Fi enabled computer with Chrome, Brave, Opera, or Edge browser.
3. Connect to Wi-Fi, install the Lightning Piggy app from the MicroPythonOS AppStore, then configure your NWC credentials in Settings.

 *Tip: To improve QR code detection when scanning, zoom in on the code in your browser to make it as large and clear as possible.*

Tons of Features

- Simple, low cost device with no subscription fees.
- Lightning-native: instant, low-cost, permissionless Bitcoin payments.
- Receive sats easily via an onscreen QR code.
- Track savings: view satoshi balance, recent transactions, and messages.
- Real-time updates: balances refresh automatically when new payments arrive.
- Flexible wallet backend: choose your own self-custodial setup, or connect in seconds with well known lightning wallet providers.
- Low power consumption - can be battery or solar powered.
- Simple & intuitive - designed for kids aged 4-100.
- Browser-based installer for easy setup and installation.
- Free & open source as standard.
- Self-build options for makers.
- Community powered: supported by a thriving global builder community.
- Built with love by bitcoiners, for the next generation of bitcoiners.

Tons of Features

Kid Friendly Sat Earning & Saving Opportunities

- Receive Bitcoin instantly: simply share an onscreen pay QR.
- Printable QR codes for choirs, rewards, homework, goals, achievements, and visual reminders.
- Optional reoccurring pocket-money payments.
- Auto-swap savings thresholds from Lightning to on-chain.

STEMM Learning Opportunities

- Beginner-friendly open-source codebase: MicroPython based OS and app introduced in LightingPiggy 2.0.
- DIY enclosures: Make your own enclosure using card, cardboard, LEGO, repurposed objects, or 3D print / laser cut a custom housing.

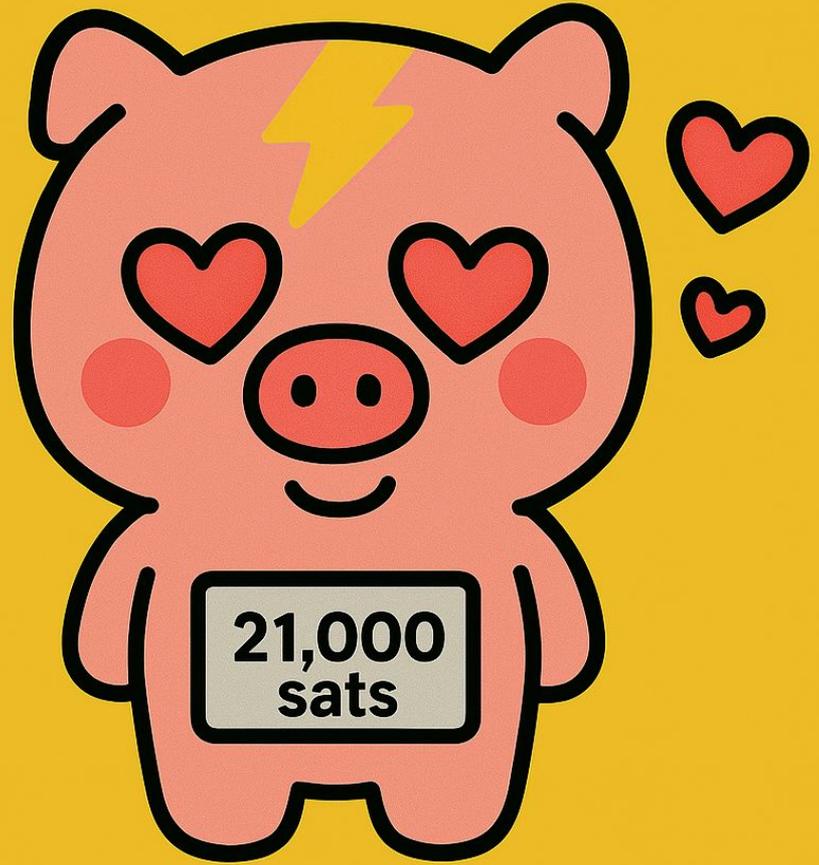

LET THERE BE ZAPS!

If everything went smoothly, you should now be able to receive ZAPS!

Thank you for participating in this workshop.
